

## 24 Hour Rapid Legionella Sampling

If you've ever been involved in the agonising 10 day wait for legionella positive sampling results to be confirmed then you would immediately understand the benefits of a new rapid 24 hour legionella test that is now available.

In partnership with an external UKAS accredited laboratory, we can now offer Legionella testing that gives positive legionella results within 24 hours – this can be crucial when you need the information to reopen a facility or system knowing that it's safe to operate.

For added assurance the test still includes the 10 day culture and so if results are required urgently then this new service can quickly provide peace of mind without compromising on industry standards.

### Here To Help

As independent consultants we will help you formulate a meaningful and effective legionella sampling strategy

prior to taking samples enabling you to see just how effective your control scheme actually is.

It must be remembered that failure to detect legionella should not be used as an excuse to relax control schemes.

A legionella negative result only means that legionella bacteria were not detected in the sample of water taken at a specific time, and not that no legionella were present in your system!

Our water division is there to help you make sense of your results and guide you in affirmative actions if required...

Our Microbiological services are fast and efficient and backed up by a wealth of experience in our team.

### Benefits of Rapid Legionella Testing

**Rapid crisis prevention:** Prevent over reaction and deal with authenticated data instead of waiting for almost 2 weeks or worst – acting in crisis.

**Confirmation Remedial Actions** have been successful: Ideal for establishing if remedial works have been effective following positive results.

**Effective Management:** Rapid and accurate information means effective decisions and therefore effective actions.
