

## Zeta Services - Water Division

### Monitoring & Control

The risk from Legionella in water systems is greatly reduced if regular monitoring is carried out as part of the legionella risk management programme. Even the most effective water treatment regime requires ongoing monitoring and management to assist continued compliance.

Our experienced water services team will create and implement procedures that ensure you stay in complete control of your water systems, deploying best practice and avoiding unnecessary disruption.

#### **Our monitoring solutions incorporate the following:**

- Record keeping
- Tank Inspections
- Shower Cleaning
- pH & Temperature monitoring
- Suspended Solids
- Testing of water hardness, chloride and chemical Levels

- Microbiological Analysis, water sampling and testing undertaken by independent UKAS accredited laboratories.
- Compliance with current water regulations and code of practice
- Recommendations for tank refurbishment if necessary

#### **To help you comply with ACoP L8 and other legislative and best practice requirements our service includes:**

- Temperature monitoring
- Microbiological monitoring
- Legionella analysis • Biofouling monitoring
