

### Schematic Drawings

ACoP L8 requires the production of schematic drawings for complex hot/cold water and evaporative cooling water systems.

As part of our Legionella Risk Assessment service, we can survey your sites to collect and record all necessary information for an accurate schematic drawing to be produced.

We can also produce colour schematic drawings (in either A3 or A4 format) available in a number of recognised formats including digital.

#### About Our Schematic Service:

- We can either take receipt of your own out of date, or hand drawn surveys, or attend site, record your systems and interview your operators ourselves and produce sketches from which we produce the finished drawing.
- We create AutoCad drawings, either in traditional 2D schematic sectional format, or 3D Isometric format.
- We can present in full colour on paper from A4 to A0, laminated for protection if required, and as many copies as requested.
- We dispatch A3 pdf copies by email on completion for instant transfer making sure you are fully compliant as soon as possible.
- We can send the electronic CAD file to assist you in future management of your site
